## **APPENDIX 1**

## APPENDIX 1: Glossary and List of Tables/Figures

### *Glossary of Main Terms Used*

**Anysite Report:** Report of population and expenditure for a geographic area prepared by MapInfo Pitney Bowes.

**Commercial centres:** focussed on particular uses eg shopping or leisure and are identified in the development plan as part of the network.

**Comparison Goods:** Durable goods such as clothing, household goods, furniture, DIY and electrical goods, also known as non-food goods.

**Convenience Goods:** Consumer goods purchased on a regular basis, including food, groceries toiletries and cleaning materials.

**Datazone :** Geographic boundaries for demographic analysis, used widely in the UK.

**Edge of town centre:** generally can be interpreted as adjacent to the boundary of the town centre but consideration must also be given to the local context, including function character and accessibility.

**GIS:** Geographic Information System

**Gross Floorspace:** Total external floorspace including exterior walls.

**Housing Land Audit:** annual local authority assessment of housing completions versus planned delivery.

**Leakage:** Expenditure flowing outwith a defined area, either a defined catchment or the entire study area

**MapInfo:** GIS software package.

**Net Floorspace:** Retail floorspace devoted to the sale of goods, excluding storage space etc.

**Out of centre:** should be considered only if it can be demonstrated that all town centre edge of town centre and all other commercial centre options have been thoroughly assessed.

**Per Capita Spend:** expenditure estimate per person, per annum.

**Postcode area/district/sector/unit:** Geographic boundaries based on postcode mapping, used prior to the introduction of datazones.

**Retail Capacity Study:** Analysis of theoretical retail capacity based on the balance of expenditure versus turnover, for a base year and forecast years.

***Retail Rankings:*** Annual publication of retail data and analysis, including turnover rates.

**SIMD:** Scottish Index of Multiple Deprivation, database of deprivation data geographically ranked by magnitude

**SNS:** Scottish Neighbourhood Statistics, GIS-based database of socioeconomic data.

**Town Centre:** Defined town centre, also retail centre or retail core or primary/secondary shopping areas, in a development plan.

**Turnover:** Trading performance of a retailer, the product of turnover rate multiplied by net floorspace.

**Turnover rate:** Estimate of the trading performance of a retailer, division of turnover by net floorspace.

***List of Figures and Tables (not appendices)***

## **APPENDIX 2**

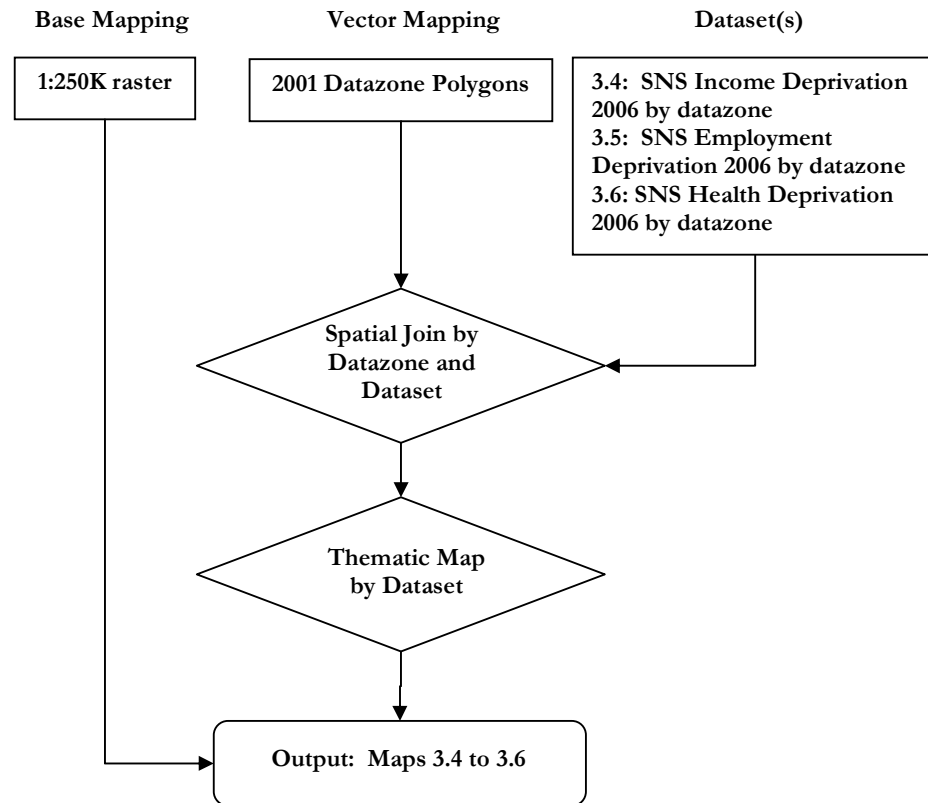

## APPENDIX 2: Cartographic Model

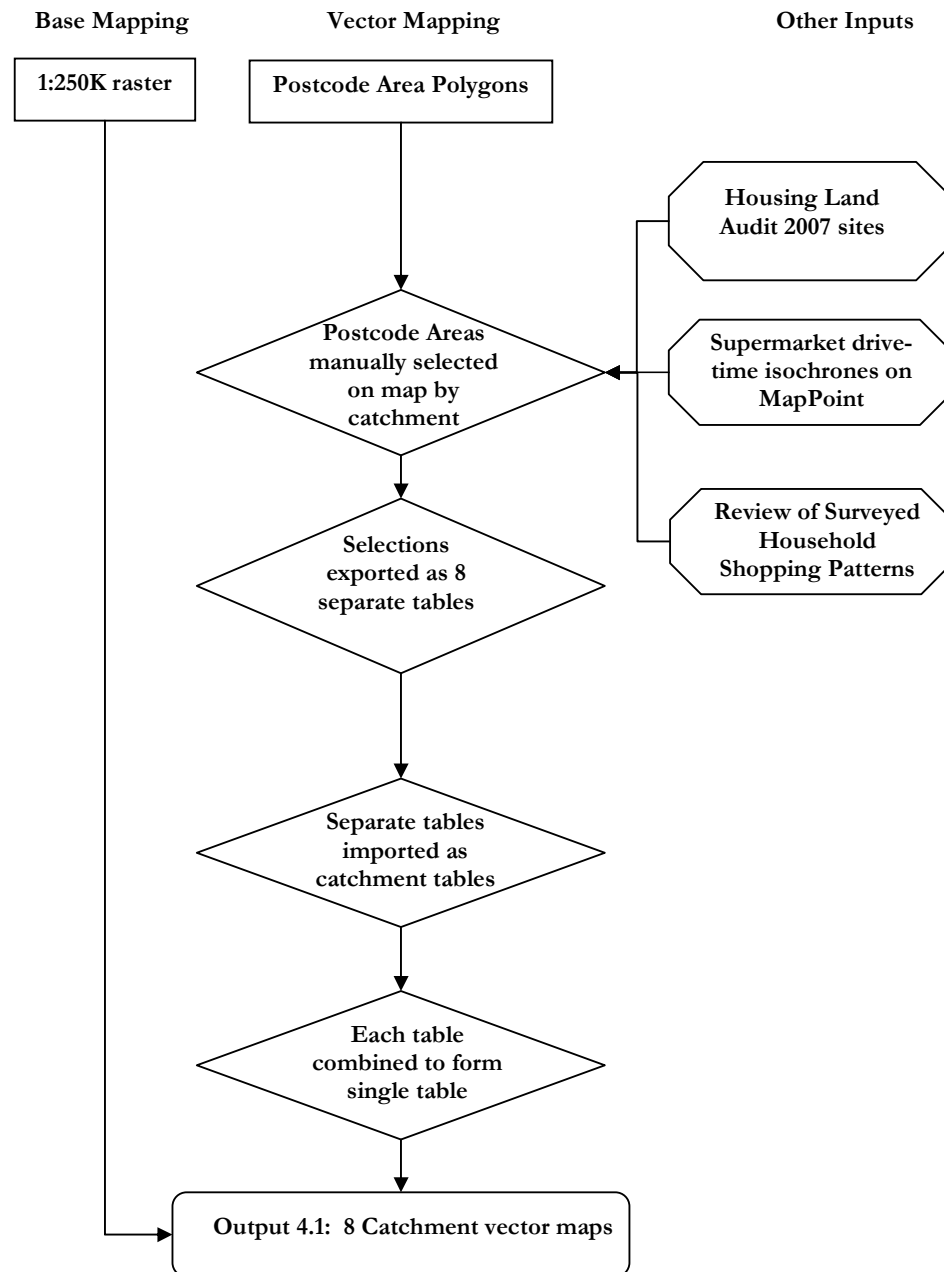

### *Introduction*

A cartographic model is a diagram illustrating the function of a GIS model, usually a flowchart. This appendix details the use of mapping and tables in the figures and processes used within this Study. All maps were produced using MapInfo unless otherwise indicated. This Appendix will allow maps to be recreated from data, for example for trend analysis.

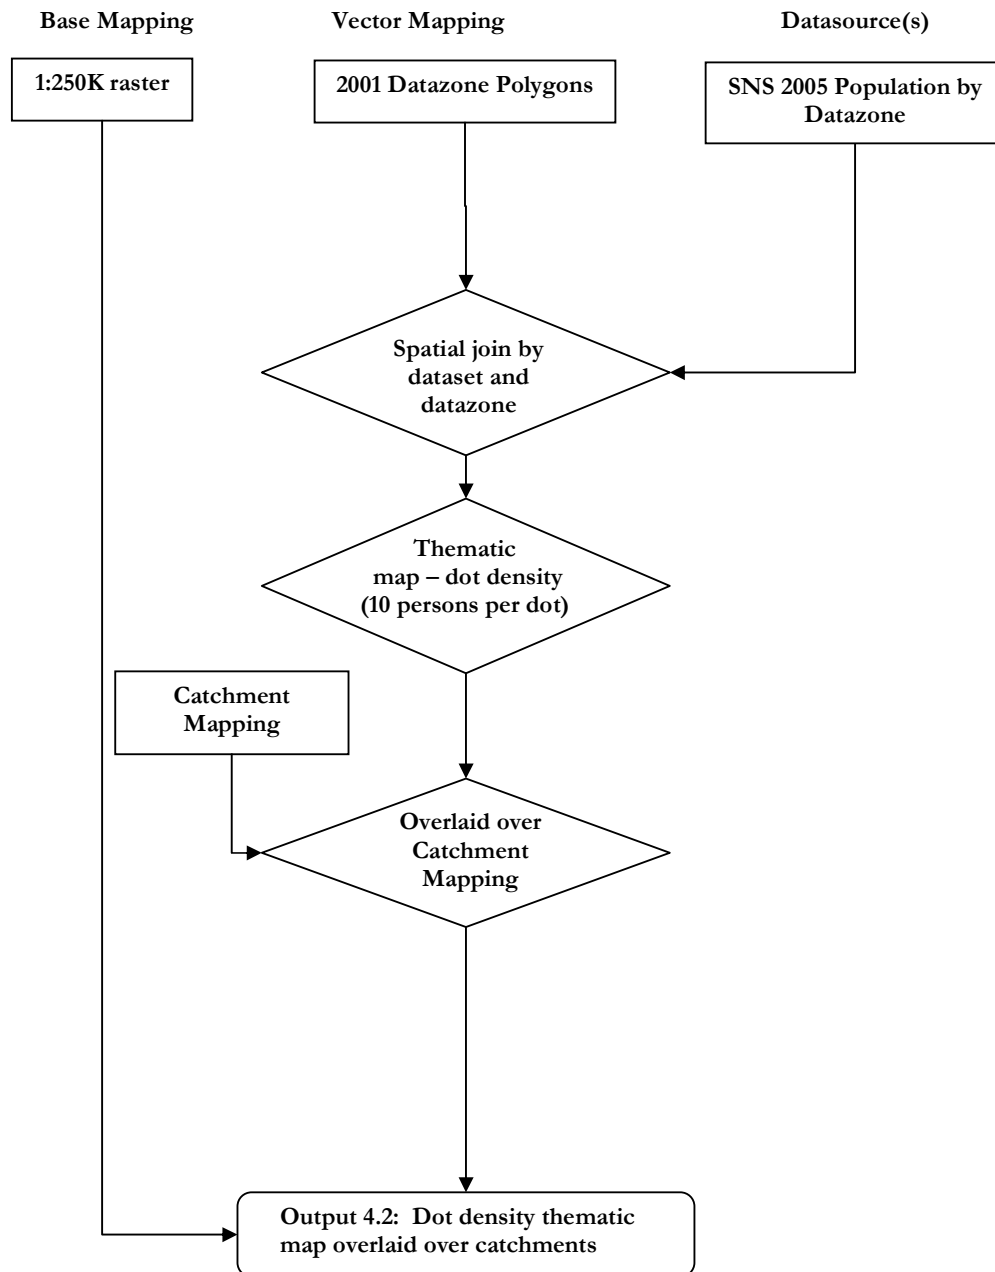

#### **A2.1. Figures 3.4 to 3.6**

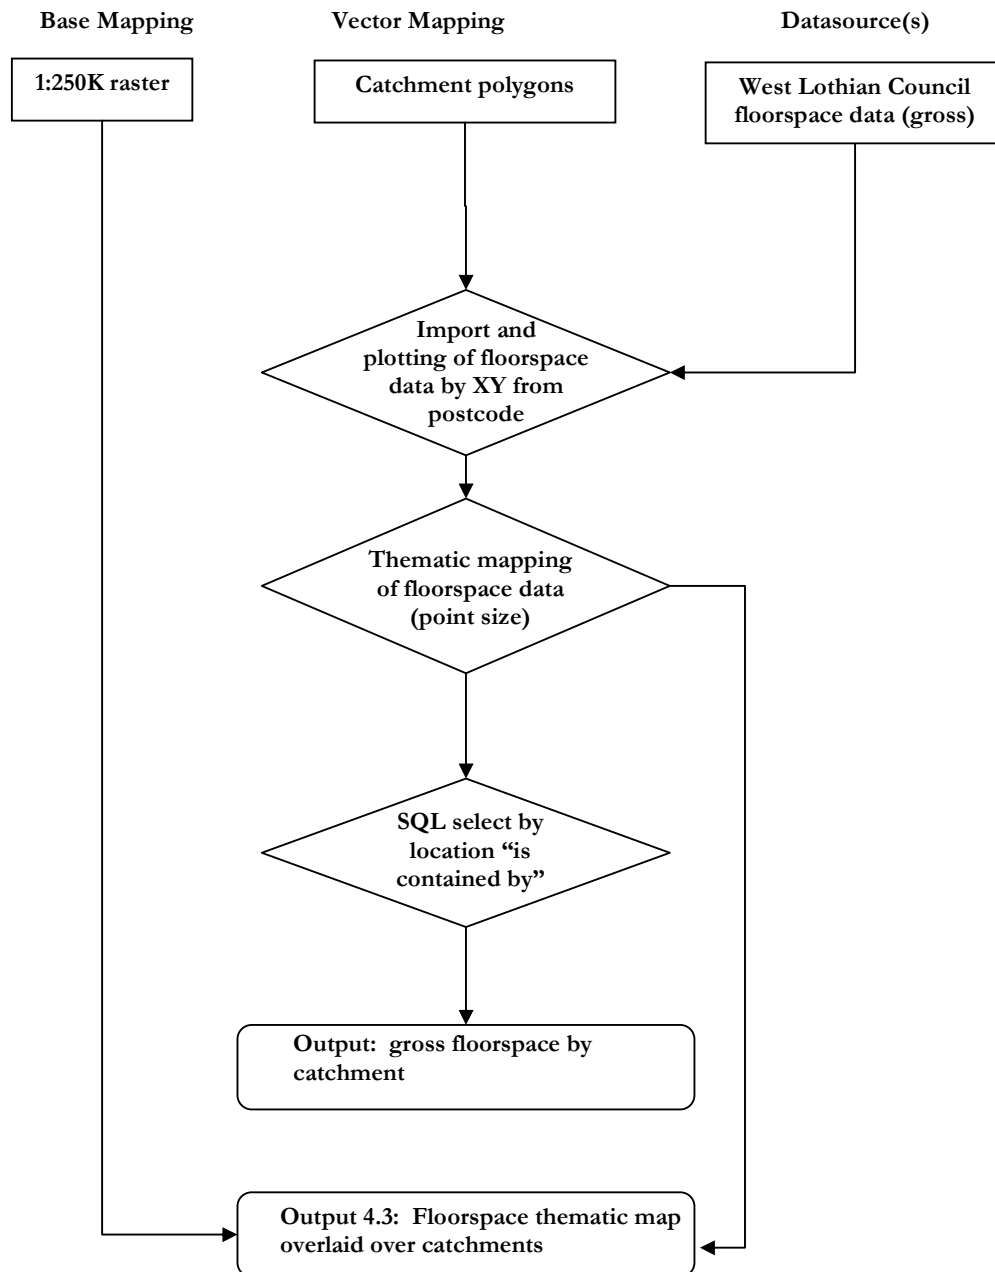

A2.2. Figure 4.1

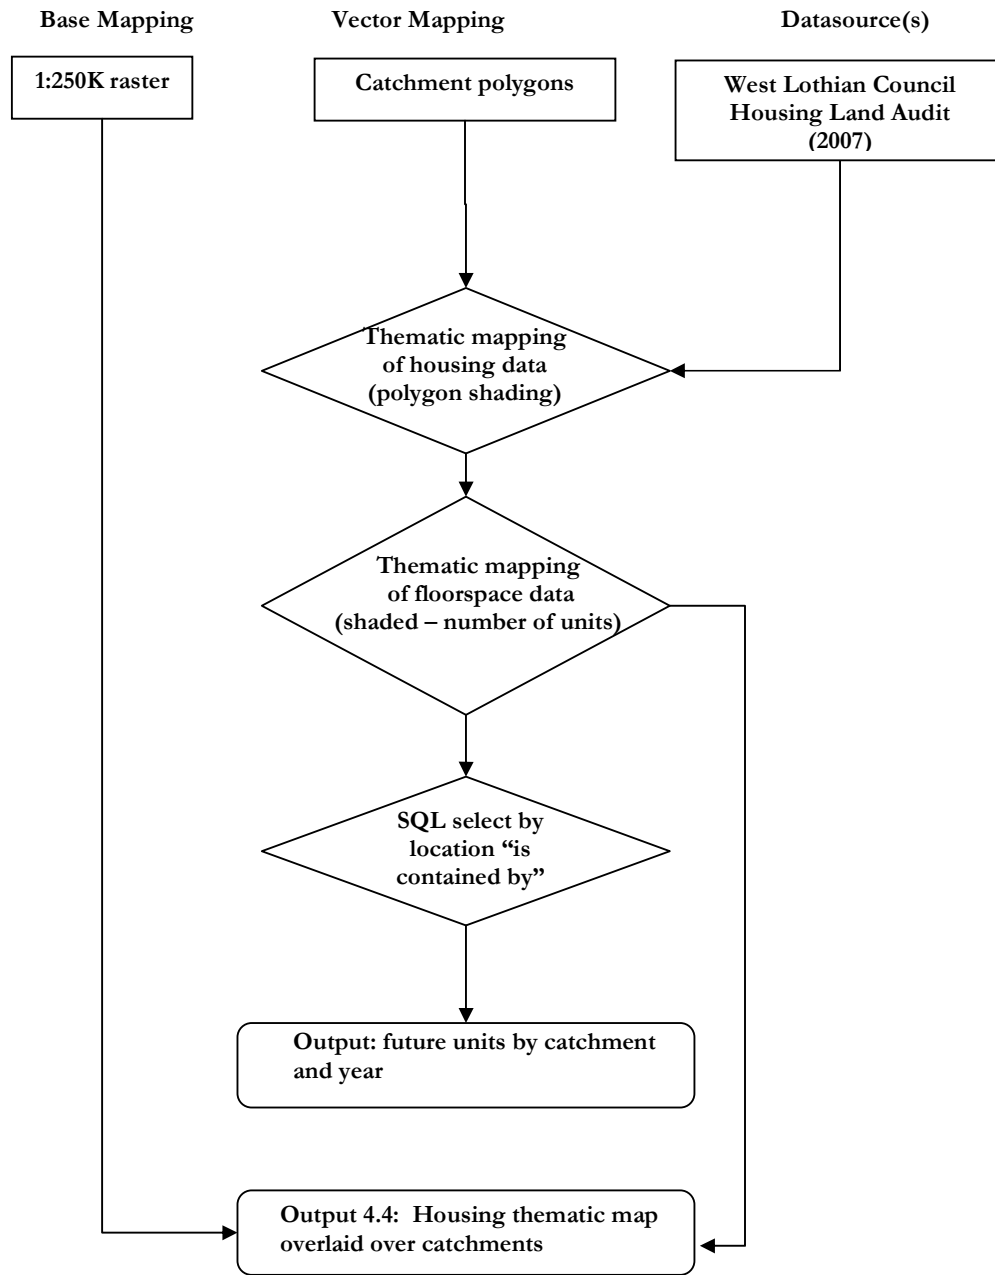

A2.3. Figure 4.2

#### A2.4 Figures 4.3

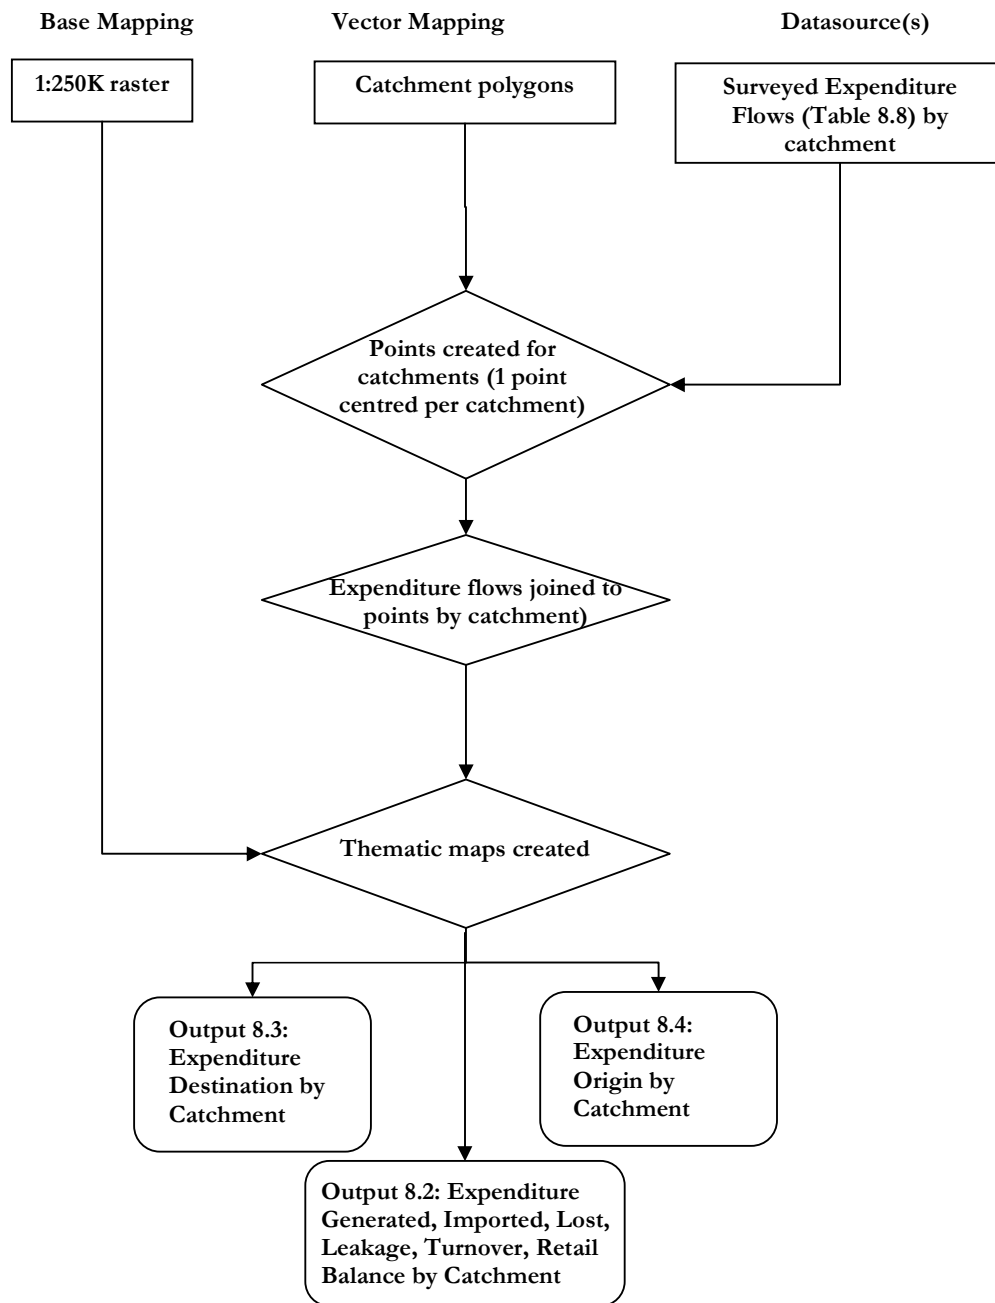

#### A2.5. Figures 4.4

#### A2.6. Figure 4.5

This figure was created using MapPoint, importing a table of foodstores supplied by West Lothian Council and creating 10 minute drive-time isochrones around each of the major foodstores. The foodstores are shaded by relative size based on the number of employees.

**A2.7. Figures 8.2 to 8.4**

**A2.7. Figures 9.2 to 9.10.**

These figures are either the straightforward illustration of sites on the base mapping at varying scales, or mapping supplied by West Lothian Council.

The information contained in this report is supplied on condition that it is to be used solely by the commissioning organisation and/or its professional advisers, and may not be published or communicated to any other organisation or individual, whether in whole or in part, without prior written permission of PB MapInfo. Special arrangements may apply in the case of approved group purchase, or where additional copies are required for use at public inquiries. In such cases additional royalties will become payable. Contact PB MapInfo for further information.

## PREFACE

This report is produced by PB MapInfo's AnySite<sup>®</sup> software which provides detailed, comprehensive and up to date information on the demographic structure, lifestyle, consumer expenditure and retail business turnover potential of any area. AnySite<sup>®</sup> may be licensed with the data PowerPacks used in this report, for use on any personal computer. All the data used in this report together with other Census of Population data, consumer expenditure, digital maps, boundaries and a wide range of other data sets are available for use with AnySite<sup>®</sup>.

**2001 Census:** The census data contained in this report was derived from the 2001 Census, which is publicly available from the Office for National Statistics (ONS), the General Register Office for Scotland (GROS) and the Northern Ireland Statistics and Research Agency (NISRA). The data are subject to Crown Copyright. Crown copyright material is reproduced with the permission of the Controller of HMSO and the Queen's Printer for Scotland.

2001 Census counts are subject to small cell adjustment, where small counts are adjusted by the Census offices in order to prevent inadvertent disclosure of information about identifiable individuals. As a result of small cell adjustment, caution should be taken in interpreting small cell counts, particularly where many such counts have been added together as for user-defined study areas. Topics were independently adjusted, which means that counts of the same population in two different tables may not necessarily be the same. Tables for higher geographical levels have been adjusted independently, and therefore will not necessarily be the sum of the lower geographical component units.

Demographic data for non-census years have been derived from the official mid-year estimates of population by the local authority, the latest population projections and other indicators of population change, by PB MapInfo.

**Expenditure:** Consumer retail expenditure estimates are prepared using methods developed and extensively tested since 1980. They take account of the socio-economic characteristics of the local resident population, the changing economic climate both locally and nationally, and the official estimates of consumer expenditure at a national level. They are completely compatible with the MapInfo UK goods based retail expenditure estimates and price indices published annually in the MapInfo Information Brief series. For those who have also purchased the Retail Business Turnover Potential reports, additional estimates are given showing the retail business turnover potential of the area derived from the consumer retail expenditure by goods type for the same area.

**Mapping:** Maps included in this report are produced by PB MapInfo's AnySite<sup>®</sup> software using PB MapInfo's StreetPro<sup>®</sup> digital map derived from Ordnance Survey and TeleAtlas mapping, GBPro Mapping derived from Bartholomew mapping, or Cartique mapping derived from AND Data. Ordnance Survey data is © Crown Copyright. The Bartholomew cartographic data is © Collins Bartholomew Ltd. Cartique is © AND Data Ireland Ltd. Neither the Ordnance Survey, Bartholomew or AND Data make any guarantee or warranty with regards to the accuracy of the data supplied and accept no liability for loss or damage incurred as a result of any reliance on the data. Postcode boundaries, where shown, are produced using PostMap © Collins Bartholomew Ltd and © The Post Office. These and many other digital data sets may be obtained from PB MapInfo for use with AnySite<sup>®</sup>.

Whilst every care has been taken in the preparation and checking of this report MapInfo Limited cannot accept liability for any errors or omissions, nor for the consequences thereof.

## **APPENDIX 5**

Appendix 5. Population and Per Capita Spend Breakdown

Methodology:

Data source: MapInfo Anysite Report for West Lothian  
Population data by postcode sector - 2008  
Per Capita Spend data by postcode sector - 2005

Mapping: MapInfo  
Spatial query - postcode units within catchment  
Excel spreadsheet - postcode units within catchments as % of postcode sector

A. Population.  
Table A5.1

Population data is aggregated based on postcode sector coverage, namely the percentage of a postcode sector within the catchment, mapped using MapInfo, applied to the postcode sector population and aggregated for all postcode sectors which are wholly or partly within the catchment.  
A catchment could contain 50% of the population of one postcode sector (population 3,000), 75% of another postcode sector (population (2,000) and 100% of a third postcode sector (population 1,000)  
The population would be 50% x 3,000 plus 75% x 2,000 plus 100% x 1,000 ie. 3,000 + 1,500 + 1,000 = 5,500

Example:

B. Per Capita Spend  
Table A5.2

Per capita spend data is averaged by catchment based on the percentage of a catchment which comprises a particular postcode sector, mapped using MapInfo  
A catchment could comprise of 50% of a postcode sector with PCS of £1,900 p.a, 30% of a postcode sector with PCS of £1,800 p.a. and 20% of a postcode sector of £1,850 p.a  
The weighted average would be 50% of £1,900 plus 30% of £1,800 plus 20% of £1,850, or £950 + £540 + £370 = £1,860

Example:

## 6.2

### *Traffic Access and Movement*

#### 6.2.1

##### *Access Preferences*

#### 6.2.2

The following chart, from the Design Manual for Roads and Bridges, shows approximately, for single carriageway roads, the various levels of T-junction which may be applicable for different combinations of flows. The information takes into account geometric and traffic delays, entry and turning traffic flows, and accident costs. However, this only gives a starting point for junction choice and other factors should be considered in a more detailed assessment.

**Figure A6.1: Approximate Level of Provision of T-junctions on New Single Carriageway Roads for Various Major and Minor Road Design Year Traffic Flows**

#### 6.2.3

Based on this chart it can be assumed that the main vehicular access to all of the development sites being considered is likely to be taken from a priority junction, although, particularly in the case of the potential sites in Armadale and Whitburn these would likely incorporate a ghost-island in order to accommodate and protect the vehicles making right-turn manoeuvres.

#### 6.2.4

Access for vehicles to the first potential site in Armadale would be via East Main Street allowing access to Armadale to the west and neighbouring areas to the east, predominantly the western end of Bathgate. Vehicular access to the second potential site would be from North Road enabling access to the town to the south and any outlying more rural areas to the north. Access for traffic to the third site would be via Lower Bathville which would allow access to the town of Armadale and possibly the area of Bathgate served from Lower Bathville. Access to the

fourth site for vehicular traffic would be from any newly constructed roads and would need to be considered as part of the overall development of the surrounding area.

#### 6.2.5

The first potential site in Broxburn would be accessible for vehicular traffic from East Main Street with the majority of traffic coming from the west, where the residential areas of the town are situated. It is likely that the existing priority junction would be sufficient to accommodate the number of vehicles likely to use this site. The second potential site could be accessed by vehicles from two possible routes. The first would be via Greendykes Road with the majority of traffic coming from the south via the existing East Main Street/Strathbrock Place/West Main Street/Greendykes Road signalised junction. The existing priority junction is likely to prove sufficient in accommodating the number of vehicles likely to use this site. The second possible route would be via Galloway Crescent which serves a predominantly residential area. This second route may prove to be contentious considering the areas residential nature.

#### 6.2.6

The proposed site in Whitburn would be accessed via Polkemmet Road, which, it is assumed, will be substantially upgraded considering the significant development to be seen in this area of the town. A priority junction, with ghost-island, would likely suffice in accommodating the number of vehicles likely to use this site. There is currently a roundabout junction being constructed where Polkemmet Road meets the B7066 which will also eventually link to a new junction to be constructed with the M8 motorway.

#### 6.2.7

The location, layout and geometry of any proposed junction should be such that safe access is provided and that minimal delays are experienced by both vehicles entering from and exiting to the existing road network. The need to maintain road safety and minimise the likelihood of congestion will dictate the spacing and location of major access points. At priority junctions there should be full visibility to the left and to the right between points 1.05m above carriageway level over the visibility splay area as defined below.

**Table A6.2: Visibility Requirements**

Major Road Type	Minor Road Type	Visibility Splay (metres)	
		X	Y
District Distributor	Traffic Distributor	9	120
Traffic Distributor	Traffic Distributor	9	90 or 120*
Traffic Distributor	Industrial	9	90 or 120*
Traffic Distributor	Residential Core	9	90 or 120*
Industrial	Industrial	4.5	60
Residential Core	Residential Core	4.5	35
Residential Core	Housing or Shared Surface	2.5	35
Housing	Housing or Shared Surface	2.5	35

\* A Y distance of 90 metres is appropriate on a road with a 30mph speed limit and 120m on a road with a 40mph speed limit

- 6.2.8 The minimum radii for corners are determined by the need for vehicles using the junction to manoeuvre safely. Junctions with a 10.5m radius will allow almost all goods vehicles to turn without interfering with the traffic on the major road.

**Table A6.3: Minimum Corner Radii Requirements**

Major Road Type	Minor Road Type	Minimum Corner Radii (m)
District Distributor	Traffic Distributor	10.5
Traffic Distributor	Traffic Distributor	10.5
Traffic Distributor	Industrial	10.5
Traffic Distributor	Residential Core	7.5
Industrial	Industrial	9.0
Residential Core	Residential Core	6.0
Residential Core	Housing or Shared Surface Cul-de-Sac	4.5
Housing	Housing or Shared Surface Cul-de-Sac	4.5

- 6.2.9 It is predicted at this stage that the provision of a priority junction layout with a visibility splay of 9.0m x 90m and minimum corner radii of 10.5m, to enable vehicles using the junction to manoeuvre safely, will be sufficient at all potential sites being considered.

- 6.2.10 *Servicing*  
All developments should be designed such that the premises can be serviced from vehicles off the main carriageway without adversely affecting road safety. The size and layout of all service areas should be such that all vehicles can enter and exit in a forward gear and do not need to reverse onto the public road. Evidence to prove that the necessary manoeuvres can be executed successfully will be required at detailed planning stage.

### **6.3**

#### ***Car parking***

##### **6.3.1**

The sites being considered in this study will require their own car parking facilities to meet the demand of each, and this chapter estimates the amount of parking required so as not to have a negative impact on the surrounding streets. On-site parking should be placed so as not to obstruct pedestrian and cycle routes or access to public transport.

##### **6.3.2**

As one of the tools of demand management to encourage modal shift, SPP17 required each council to adopt a set of maximum parking standards for on-site parking at new developments, although the standards currently used by WLC make no reference to maximum parking standards. Where an area is well served by sustainable modes, there is clear scope for adopting more restrictive parking standards with the objective of reducing car use. Conversely in rural areas where public transport is scarce, standards may need to be more relaxed, provided such relaxation does not further undermine public transport viability.

##### **6.3.3**

Specific provision should be made for parking for disabled people in addition to the general parking. As a general rule, parking for disabled people should be located as close to building entrances as feasible, and with level access between vehicle and building. In addition, parent and child parking should be designated within the maximum number of general parking spaces allowed. These spaces should be of sufficient size to enable things such as safe transfer of children to buggies and should be nearest the building entrance, after spaces for disabled people have been allocated.

##### **6.3.4**

Within development sites, Councils should ensure that secure, sheltered cycle parking is more conveniently located to building entrances than the car parking.

##### **6.3.5**

The following standards are those extracted from the relevant Strathclyde 'Roads Development Guide' which are currently used by WLC.

**Table A6.4: Commercial Development Provision (Food Superstore (stand alone) – includes hypermarkets and supermarkets)**

Size GFA (m <sup>2</sup> )	Appropriate Provision (spaces per 100m <sup>2</sup> )
0 – 500	5.0
500 – 2000	6.5
2000 – 5000	8.0
5000 – 8000	7.0
> 8000	6.0

**Table A6.5: Number of Designated Disabled Parking Bays**

Development	Size of Car	No. of Spaces	Comment
Shopping, Leisure or Recreational	Up to 200 spaces	6% of total	Minimum of 3 spaces
	Over 200 spaces	4 spaces plus 4% of total	-

**Table A6.6: Cycle Parking Requirements**

Type of Development	Appropriate Provision
General Commercial	2 spaces, plus 4 spaces per 100 car parking spaces

6.3.6

The following maximum car parking standards are those extracted from SPP17:

**Table A6.7: National parking standards (SPP17)**

	Threshold from and above which standard applies	National max. parking standard applicable to whole development
Retail (food) (use class 1)	1000m <sup>2</sup>	1 space per 14m <sup>2</sup> (see note 1)

Note 1: Where a retail development car park is designed to provide general town centre parking, or can be demonstrated to do so to a significant extent, that should be recognised in the amount of parking that is permitted above that specifically allowed for the development. In such cases, provision in excess of the above standard would not invoke referral to the Scottish Ministers.

**Table A6.8: Minimum disabled parking provision required (SPP17)**

	<b>Car park max. standard size up to 200 spaces</b>	<b>Car park max. standard size over 200 spaces</b>
Retail, Leisure and Recreation Uses	3 spaces or 6% of maximum standard size whichever is greater	4 spaces plus 4% of maximum standard size

6.3.7

*Parking Provision*

Based on the two standards summarised above and the information available on the proposed composition of the sites the following parking provision has been calculated:

**Table A6.9: Car Park Provision (WLC)**

<b>Site</b>	<b>Size (m<sup>2</sup>)</b>	<b>Car Parking</b>	<b>Visitor Parking</b>	<b>Cycle Parking</b>	<b>Disabled Parking</b>
Armadale	2,243	176	-	6	11
Broxburn	1,813	108	-	6	6
Whitburn	570	32	-	2	3

**Table A6.10: Car Park Provision (SPP17)**

<b>Site</b>	<b>Size (m<sup>2</sup>)</b>	<b>Car Parking</b>	<b>Visitor Parking</b>	<b>Cycle Parking</b>	<b>Disabled Parking</b>
Armadale	2,243	160	-	6	10
Broxburn	1,813	129	-	6	8
Whitburn	570	41	-	2	3

6.3.8

The results of the parking provision calculations show that both propose a similar provision, although the provision for the Armadale site calculated from the WLC standards does exceed the maximum allowed by SPP17. A decision will have to be made on the exact provision at the detailed design stage.

6.3.9

The size of the standard car in the UK is approximately 4.75 metres by 1.8 metres and allowing suitable clearances all round right-angled car parking bays should be 4.8 metres by 2.5 metres where a manoeuvring width of 5.5 metres is available. Narrower road or aisle widths will require the parking bay to be widened in accordance with the dimensions below. Parallel parking bays should be 2.4 metres wide and 6.0 metres long where the bays are internal or constrained by physical means.

**Table A6.11: Car Parking Bay Width Requirements**

Aisle/road width (m)	Bay width (m)
6.00	2.50
5.50	2.50
5.30	2.75
5.00	2.80
4.80	2.90
4.50	2.95
4.00	3.10
3.50	3.20

*Bays provided for disabled persons should be a minimum of 4.8 metres (and up to 6.6 metres) long, with access to the rear of the vehicle where wheelchairs are often stored. Spaces should be 2.4 metres wide plus a minimum of 0.9 metres (and up to 1.2 metres) wide cross-hatched strip to facilitate the transfer of wheelchair passengers. Economy of space can be gained by combining spaces in pairs of standard  $4.8 \times 2.4$  metres dimensions with a common transfer zone. Alternatively, space may be saved by designating the end bays of a row of parking spaces, provided that access can be gained onto the adjacent road surface. A flush dropped kerb must be provided at any disabled parking bay to allow access to the footway. Dedicated spaces should be located to give direct and safe access to the building.*
