## Information Sheet FH18

### Are you ready for inspection?: A guide for Street Traders

It is to everyone's benefit that your vehicle is ready for inspection and to trade. This note is to help you to be prepared.

A Certificate of Compliance is required from this service to state that the vehicle or unit you will be using meets the appropriate requirements of the food hygiene regulations. As the vehicle or unit will be inspected before it is operating only certain areas of compliance can be determined. In the interests of public safety, however, we also want to establish that the business will comply with health and safety requirements.

Matters below marked '\*\*' must be dealt with. If you haven't got to grips with these points before your inspection, you will not get a Certificate of Compliance for your vehicle. This means that you cannot trade. The other matters relate to complying with food safety and workplace safety laws.

Remember that the vehicle should be in 'ready to trade' condition. This means that all equipment should be working at the time of the inspection. You may need to have run the engine, connected up gas supplies and / or connected up a generator.

If we issue you with a certificate of compliance this does not mean that you can start trading. You can only do this once you have received a full licence from West Lothian Council licensing team. To trade without a licence is an offence.

### Food Safety

As part of our inspection of your vehicle or unit we will look at the following:

#### Food Safety Management

1. Can you show:

- That you are aware of all potential food safety problems?;
- How you will control these problems, i.e. What steps have you taken to keep food safe?; and
- How you are going to check that food is safe?

- You have a probe thermometer available for checking hot and cold food temperatures?

You need to be able to do this before Environmental Health can have confidence in the safety of your operations. It is also a legal requirement.

### **Food Safety Knowledge\***

2. Knowledge of food safety and hygiene is essential to running a safe food business. If you have not had any recent food hygiene training, we would expect you to attend the Elementary Food Hygiene course.

Food hygiene training courses are available from West Lothian College in Livingston. For details of courses, contact the College on 01506 418181. Other colleges or training providers may hold similar courses.

The Royal Environmental Health Institute of Scotland will be able to provide you with details of other training centres who run Food Hygiene Courses. They can also provide details of trainers who run courses in languages other than English. Their telephone number is 0131 229 2968.

### **Structure\***

3. Is the vehicle:
  - Clean?
  - Easy to keep clean?
  - In good condition?
4. Is the layout adequate to allow safe food preparation, including good separation of raw and ready to eat foods?

### **Equipment\***

5. Is all equipment on the vehicle:
  - Clean?
  - Easy to keep clean?
  - In good condition?
  - Working properly? Remember that fridges will need time to get to the correct operating temperature **before** they are inspected.

### **Cleaning and Disinfection\***

6. Is the vehicle clean, with all food and hand contact surfaces sanitised?
7. Does the vehicle have at least one sink for washing equipment, which is distinct from the one used for hand washing? (Two sinks side by side are recommended for cleaning equipment, along with a drying /draining area.)
8. Have you got the correct cleaning materials available? These will include:
  - Bactericidal detergent meeting BS EN 1276 or BS EN 13697 and / or bactericidal grease cutter for food contact surfaces.
  - Bactericidal surface cleaner meeting BS EN 1276 or BS EN 13697
  - Detergent / grease cutter for non-food contact surfaces

- Cloths, preferably colour coded - these should be disposable and separate for raw and ready to eat food areas, and utensils etc. Better still is to use disposable blue paper towel.
9. Are all the sinks supplied with hot water? This should be piped and not rely on the use of bottles or other containers to transfer water from an urn.

### **Storage\***

10. Do have adequate facilities for storing chilled and frozen food at a safe temperature?  
Can you prove that the food is always at a safe temperature?
11. Can you keep raw and ready to eat foods safely apart?
12. How do you protect food stored at room temperature from contamination?

### **Preparation Facilities\***

13. Is there enough space for food preparation?
14. Are there separate areas for the handling of raw and ready to eat foods?

### **Personal Hygiene\***

15. Do you have enough protective clothing for a full week's trade? This should include a clean coat, tunic, uniform or similar, plus head covering. The protective clothing should cover any warm clothing worn, such as fleeces or pullovers.
16. How often are you going to change your protective clothing and how will you clean it?
17. Can you demonstrate to the inspector that you know what is meant by 'good personal hygiene'?
18. Have you got:
- A dedicated hand washbasin with piped hot water at a safe temperature? (Approximately + 41°C is recommended)
  - Materials for cleaning your hands, which will not taint the food?
  - A way of drying your hands which will not carry bacteria? (Disposable paper towels are recommended)

### **Waste\***

19. Are bins available for use both inside and, where appropriate, outside the van?
20. What are your arrangements for disposing of the waste?
21. Do you have wastewater container(s)?

### **Water Supply\***

22. Have you got a safe supply of cold water to fill the containers for the vehicle?
23. Are the water containers and pipe-work:
- Clean and easy to keep clean

- In good condition
  - Distinguished from those used for wastewater?
24. What do you use for routine cleaning of the water containers? If you are not sure, more information is available in **Information Sheet FH04**

## Workplace Health, Safety and Welfare

The certificate of compliance is required for food safety matters only. However, we consider public safety to be vitally important. We will also consider the following matters, and report any concerns to our licensing department in regard to your application. So, as appropriate, please consider the following.

### Equipment

25. Is all equipment, which could burn or scald secured to stop it coming loose accidentally?

### Fire safety

26. Do you have:
- A fire blanket if you fry foods on the vehicle
  - A dry powder fire extinguisher, which must be within its expiry date.
- Are these easily accessible?

### First Aid

27. Do you have a well-stocked first aid kit, with contents all within their expiry date?

### Gas Safety

28. Do you have a current Gas Safety Certificate for the LPG installation on your vehicle? If you haven't, you'll need to have it inspected by an appropriately qualified **Gas Safe** registered engineer. Call Gas Safe on 0800 408 5500, or visit [www.gassaferegister.co.uk](http://www.gassaferegister.co.uk) for up to date details of engineers in your area. The certificate must be renewed each year.
29. Are gas cylinders, including empties, well restrained?
30. Is the compartment for the gas cylinders:
- Ventilated at high and low level to the outside of the vehicle;
  - Sealed to the inside with 30 minutes fire resistance; and
  - Marked as containing LPG?
31. Are the gas pipes:
- Protected against damage from rubbing against other fixings during movement of the vehicle; and
  - Where flexible, as short as possible and away from areas where knives are used?

Remember, we are here to help you run your business safely, so ask for help if you are unsure of any aspect. Call us on 01506 280000 or email [environmentalhealth@westlothian.gov.uk](mailto:environmentalhealth@westlothian.gov.uk).
